- ShardGuard Safety Coated Incandescent HID & HPS Lamps
- Low Temperature PolarGuard Fluorescent Jacketed Lamps
- Semiconductor Gold Fluorescent Lighting
- Graphic Arts & Darkroom Safelights
- Colored Stick Lights and Designer Lighting Products

EncapSulite UltraGuard "FEP" Safety Coating for High Temperature T5 - T5HO and T8

Better Products - Better Lighting - Patented Technology

EncapSulite International has developed new technology to utilize the high temperature properties of E.I. DuPont "FEP" Teflon for the safety coating of T5 - T5HO and long life T8 fluorescent lamps. This new technology is the answer for lamps that are specified for use in closed and open fixtures. Cost effective - the coating is guaranteed for the rated life of the fluorescent lamp. Do not be fooled by imitators using other plastics that cannot take the heat and the UV. Ask for a written safety coating guarantee for the rated life of the lamp in a closed fixture. The high mechanical strength safety coating is clear and tough - reduces light output by less than 1% and is a minimum of 10-mils thick. For additional information, visit www.encapsulite.com/safetycoated.html.

Features:

Designed for Closed & Open Fixtures
Shatterproof Coating
Will Not Crack or Yellow
Transmits UV

Applications:

High-Bay Lighting Applications, Germicidal, Food Processing, Warehouse, Retail, Grocery, Pharmaceutical, HVAC, Aquariums, Bug Zappers.

Coating Only Service For Customer Supplied Lamps

EncapSulite offers a low cost service for the volume safety coated lamp user. Ship your lamps to the EncapSulite plant and we will safety coat the lamps with our UltraGuard "FEP" Teflon safety coating and return to the destination of your choice. Economical, Efficient, Quick.
